Worksheet 4 Sept 30, 2022

1. Let $f(x) \in \mathbb{Z}[x]$, let $n \ge 1$, and let p be a prime. For all $x, t \in \mathbb{Z}$.

$$f(x + p^n t) \equiv f(x) + f'(x)p^n t \pmod{p^{n+1}}.$$

Hints:

1. Step 1: Write the Taylor expansion of f.

2. Step 2: Show
$$p^{n+1} | \frac{f^{(j)}(x)}{j!} p^{jn} t^j$$
 for $j \ge 2$.

Substep 1: Show $\frac{f^{(j)}(x)}{j!}$ is an integer. In order to show this prove that the product of k consecutive integers is divisible by k! $(k \ge 1)$

2. Solve the congruence $x^2 + 5x + 18 \equiv 0 \pmod{49}$.
